Why Does Reebok Connect Need Notification Access?

Inas B. - 2026-11-26 - Reebok Connect

Notification access allows Reebok Connect to receive supported notifications from your smartphone and forward them to your connected Reebok smartwatch.

What does notification access do?

When notification access is enabled, your watch can display supported alerts from your phone, such as:

- Incoming call notifications.
- Text messages.
- Notifications from supported apps.

The notifications and available features may vary depending on your smartphone, operating system, watch model, and the capabilities of individual apps.

Does notification access need to stay enabled?

Yes. For your smartwatch to receive notifications reliably, notification access must remain enabled in your smartphone's settings, including when Reebok Connect is running in the background or is not currently open.

If you disable this permission, your smartwatch may remain connected to your phone, but it will not receive supported phone notifications through Reebok Connect.

How do I enable notification access?

1. Open your smartphone's settings.
2. Look for **Notification Access**, **Notification Permissions**, or a similarly named setting.
3. Find **Reebok Connect** and enable notification access.
4. If prompted, confirm that you want to grant the permission.

The exact menu names and steps vary depending on your smartphone and operating system.

Once access is enabled, open Reebok Connect and check your device's notification settings to make sure the alerts you want to receive are selected.

A note about your privacy

Notification access allows Reebok Connect to access supported notifications so they can be delivered to your smartwatch. These notifications may contain personal or sensitive information, such as message previews or details from other apps.

Only enable notification access if you are comfortable allowing these notifications to be shared with your connected smartwatch. You can review or revoke this permission at any time through your settings.
