Accessibility and Inclusive Use of Reebok Wearables

Inas B. - 2026-10-31 - Accessibility

Technology should be useful, comfortable, and approachable for everyone. People interact with technology in different ways, and what feels simple for one person may require a little more effort or adjustment for someone else.

Reebok wearables are designed to support everyday fitness activities, provide access to supported health-related measurements, and help you stay connected throughout your day. Whether you're tracking your steps, checking your activity, or receiving notifications, your device can be part of a routine that works for you.

Making Technology Work for You

There is no single right way to use a smartwatch. Your preferences, abilities, and everyday needs all play a part in what makes a device comfortable and practical.

You might prefer a particular watch face because its information is easier to read, use your smartphone to manage settings instead of navigating menus on a smaller screen, or choose a watch band that is easier to fasten. Some models also support activating your smartphone's AI assistant, such as Google Assistant or Siri, which may offer another way to interact with certain features using voice commands.

Small adjustments can make a meaningful difference. Take the time to explore your device and discover which available features work best for you.

A Device That Fits Your Routine

Your Reebok wearable is there to complement your everyday activities, not dictate how you should move, exercise, or use technology.

Whether you enjoy regular walks, prefer gentle movement throughout the day, track specific fitness goals, or simply like having the time and notifications on your wrist, you can use the features that are relevant to your lifestyle.

Activity measurements are estimates and may vary depending on your movements and how you wear your device. They are intended for general fitness purposes and should not replace professional medical advice, diagnosis, or care.

Accessibility and Available Features

Reebok watches offer different features depending on the model. Some settings and interactions may be easier to manage through your smartphone, while other features are accessed directly on the watch.

Dedicated accessibility options, alternative input methods, and voice assistant support are not available on every model. Smartphone accessibility settings may also help with certain interactions in the Reebok Connect app, but they do not necessarily change how the watch itself operates.

We encourage you to check your model's specifications and explore the available settings to understand which options are supported.

We're Here to Help!

If you have questions about using your Reebok wearable, need help finding a setting, or would like to understand which features are available on your model, our support team is happy to assist.

You can reach us through:

- **Email:** support.reebok@vitalist.ca
- **Support Page:** https://support.connect.reebok.com/en-US/new-ticket

Let us know which model you use and what you would like help with. We'll do our best to guide you through the available options.

Technology should fit into your life, and your experience matters. We want everyone to feel welcome and confident exploring what their Reebok wearable has to offer.
