Using Your Watch with Voice Control and Smartphone Accessibility Features

Inas B. - 2026-10-31 - Accessibility

Your smartphone offers a range of accessibility settings that can make everyday technology easier to use. If you have difficulty reading, navigating, or interacting with your phone, some of these features may also help when using the Reebok Connect app.

While the available options depend on your smartphone and operating system, exploring your phone's accessibility settings may help make your overall experience more comfortable.

Accessibility Features on Your Smartphone

Depending on your device, you may have access to features such as:

- **Screen readers:** Read supported on-screen text aloud.
- **Magnification:** Enlarge parts of the screen to make information easier to see.
- **Display adjustments:** Change text size, contrast, or color settings where supported.
- **Voice control:** Use voice commands to interact with supported smartphone functions.
- **Touch accommodations:** Adjust certain touch interactions to make using the screen easier.

These features are provided by your smartphone's operating system, not by the Reebok watch itself.

Using Accessibility Features with Reebok Connect

If you use the Reebok Connect app, some smartphone accessibility settings may make it easier to navigate the app and view supported information.

For example:

- You may be able to use your phone's screen reader with supported app content.
- Display adjustments may make certain information easier to read.
- Magnification may help when viewing smaller elements.
- Voice control may assist with supported phone-level interactions.

The availability and compatibility of these features may vary depending on your smartphone, operating system, and app version.

Understanding Current Watch Limitations

Smartphone accessibility features do not necessarily extend to your Reebok watch.

Depending on the model, the watch may not support specialized features such as:

- Built-in screen readers.
- System-wide voice navigation.
- Dedicated magnification settings.
- Alternative input methods or switch control.

If you need a particular accessibility feature, check the specifications for your watch model before relying on it.

Need a Hand? We're Here to Help!

If you are having difficulty using the Reebok Connect app or need help understanding which features are available, our support team is happy to assist.

Reach out to us through any of the following channels:

- **Email:** support.reebok@vitalist.ca
