Using Reebok Wearables with Hearing Considerations

Reebok wearables are designed to keep you informed, even if you have hearing limitations. These features help ensure you stay on top of notifications, alarms, and important alerts:

Vibration Alerts:

- All notifications, timers, and alarms use strong, customizable vibrations to ensure you can feel them on your wrist.
- Vibration intensity can be adjusted in the watch settings to suit personal preference.

Visual Indicators:

- Key alerts are accompanied by clear visual icons on your watch face.
- Timers, alarms, and incoming notifications are displayed prominently for quick recognition.

Smartphone Integration:

- Pair your wearable with the Reebok Wearables app to receive notifications as on-screen pop-ups or text alerts on your phone.
- Customize which types of notifications are sent from your phone to your wearable to avoid missing critical alerts.

Best Practices:

- Experiment with vibration settings to ensure they are strong enough for your personal use.
- Place the watch on your non-dominant wrist if you find vibrations are easier to notice there.
- Combine visual alerts with wearable notifications for maximum awareness.

Disclaimer:

- Reebok wearables are not medical devices and are not intended to replace professional hearing assistance or medical advice.

For any additional accessibility support or customization requests, contact Reebok Wearables Support. Our team is here to help you tailor your device for the best experience possible.
