Can I Use Reebok Connect on a Desktop Computer, Tablet or Emulator?

Inas B. - 2026-11-17 - Reebok Connect

Reebok Connect is designed for compatible mobile devices and is not available as a desktop application.

To pair and manage your Reebok smartwatch, use a compatible smartphone with Reebok Connect installed.

Can I use Reebok Connect on a tablet?

Reebok Connect may be available on supported tablets, depending on the device and app compatibility.

Check the app listing and compatibility requirements for your tablet before installing it.

Can I use Reebok Connect with an Android emulator?

No. Reebok Connect is not designed or supported for use with Android emulators, such as BlueStacks.

Emulators run Android within a computer environment and may not provide the Bluetooth functionality or device compatibility needed to pair with and communicate with your smartwatch.

What should I use instead?

Use a compatible iPhone or Android smartphone or tablet running a supported operating system version. This provides the intended environment for pairing your watch, syncing data, and using Reebok Connect's features.
